

VISIONSCONNECTED

Office Communications Server Gateway Services

Changing an one dimensional conversation into a multifaceted collaboration experience

As video becomes increasingly important to unified communications, organizations are actively seeking to integrate their standards-based video deployments with collaboration tools such as Microsoft Office Communications Server 2007. We at VisionsConnected are able to deliver the infrastructure to establish this interoperability and thus providing users with a fully featured video network.

Enable Microsoft Office Communicator users to take advantage of the advanced functionality of the video conferencing network, while maintaining seamless connectivity with the rest of the Unified Communications environment.

The OCS Gateway Service is available as an additional function package onto our fully Managed Video Service platform or as separate product to buy.

- **Calling is easy** - Office Communicator users can make video calls to video devices using their contact list the same way they are used to.
- **Communication is more flexible** - Single identity to reach the person, Video endpoint or even meetingroom you need regardless of location.
- **Communication is more expansive** - Video accessible from the desktop, to the conference room, Telepresence Suite and 3rd party environment.
- **Greater value in investment** - Leverage investments in video equipment and Microsoft, yielding greater return.

Get the most from your investment with VisionsConnected professional services. VisionsConnected experts support deployment of complex video infrastructures, installation, configuration and usage & adoption. Visit www.visionsconnected.com for more information.
