

VISIONSCONNECTED

Streaming & Recording

The next generation video application

Streaming & Recording offers the possibility to record and distribute recorded video conferences. The material can be played simultaneously on one or more PC's at any time. It enables organizations to communicate to dispersed individuals and scale knowledge – anytime, anywhere.

STREAMING, RECORDING AND SHARE YOUR BUSINESS

- Content can be distributed extending the reach and chances that your message will be seen and heard. VisionsConnected is able to record up to five concurrent video calls, including additional media (presentations, documents, DVDs) from any standards-based SIP or H.323 videoconferencing system.
- Stream calls live to an audience worldwide or publish the recorded video for future viewing. Users can browse the library at their convenience for recorded content and easily download the files. The tool supports the most common file types like: Microsoft Windows Media® and QuickTime® compatible MPEG 4 formats. Or for those on the go, download to popular portable devices like the Apple iPod®.
- The Streaming & Recording also supports leading Web 2.0 tools, enabling users to post content to Web portals, while integration with Podcast Producer streamlines the process of capturing and publishing professional quality podcasts.

Get the most from your investment with VisionsConnected professional services. VisionsConnected experts support deployment of complex video infrastructures, installation, configuration and usage & adoption. Visit www.visionsconnected.com for more information.
